PATENT ELASTIC FIRE & WATER-PROOF CEMENT ROOFING.

THE undersigned are prepared to introduce into use in Temperate W. E. CHILDS & CO.'S PATENT ELAS-TIO FIRE AND WATER-PROOF CEMENT ROOFING, and gas the attention of Architects, Builders, Railroad Com-

ARCHITECTS AND BUILDERS should not fail to examine this Roofing, as it is belter any cheaper than any thing in ase. The invertal forms a hard and smooth surface that will resist the action of the atmosphere in every climate. It is impervious to water, clastic, and flexible. It contracts and expands with the changes of the atmosphere, and will neither evaporate, crack nor rot, and, as to its durability, there is no question. phere, and will neither evaporate, traits its durability, there is no question.

It is practically imperishable, and will perfectfully resist any ordinary external exposure to fire, as is shandantly proved, and we will warrant it water-proof. We will approved, and we will warrant it water-proof. We will approved, and we should not a put our Roofing on over ordinary good beathing, old sharles, tar and gravel, tin, sine, copper or iron roofs—it making no difference how steep or flat they may be—for seven dollars per our hundred square feet; it being far cheaper than any Roof of the old style, and we are sure it will give better satisfaction.

will give better satisfaction.

Is will also be found to be the best using ever invented to cover or mend old teaks the taring gravel roots, or around chimners, scuttles, doesner windows, and gutters, where the tin is rusted through. This Cement can be put on to last as long as stone, and form a perfect adhesion to any object to which it is applied. The Roofs can be painted over (and warranted not to leak) at two d liam and fifty cents per hundred square feet, which is cheaper and much better than paint. This Roofing will be found to be the best theng for covering large doofs where they are exposed to fir—such as Steam Mills, Saw Mills, Factories, Railroad Cars, Bridges. Depots Station Houses, Steamboat Decks, and, in fact goory kind of Roof where there is an external exposure from fire. As the Roof is perfect, without a joint in it, it presents no chance for fire to communicate, and any

in it, it presents no chance for fire to communicate, and any light anisotones will here out without isulting.

In traces offices at Cheinnaif, and other places where Child & Co.'s Coment has been used, hasne buildings with Gods covered with this Coment, at the same rates as for those covered with iron, Copper or Tho The Cament will be furnished to those at a distance with directions for using.

Orders sent to the undersigned, through the Postoffice, will be promptly attended to

Cincinnati, Jan. 7, 1857.

Having made considerable inquiry as to the merits of the
'Patent Elastic Cement Roofing," introduced into this city
by Childs & Co., I find it to be highly recommended in this
city by many excellent judges; that it is meeting with very
ready and general introduction; that its superiority over
the tar composition Roofing is decided and freely admitted. the far composition Roofing is decided and freely admitted, and finally, I expect to adopt it for my next roof, which will be next summer—having intended to use tin, but will try
the virtue of the "Patent Elastic Roofing" as a substitute
